

For greater control over your vehicles, include telematics as part of your Fleet Management strategy.

- Minimise the risks associated with vehicle investment
- Reduce costs and
- Meet compliance and duty of care obligations.

## Innovative technology

Telematics technology is the key to improving safety for drivers, increasing your fleet's operating profitability and reducing its environmental impact. Depending on the level of reporting or logistics your business requires, telematics can be as simple as a plug in device, or more sophisticated with hard wired technology. Whichever option you choose, you'll improve vehicle compliance and benefit from enhanced operational performance across your fleet.

### LogbookMe

Easy plug in device that automatically records logbook data.

This easy to install hardware solution uses GPS to provide enhanced management reporting and promote safer driver behaviour. Automatically recording your logbook data securely, saves time and improves accuracy.

### EROAD

Hard wired technology that continuously transmits encrypted data.

Install this system into your fleet to monitor your vehicles in real time. Insightful reporting helps you meet your health and safety obligations, improve compliance, and enhance operational performance, while reducing administration costs.

### Plug and play

Self-installation ensures no upfront costs to meet your PCBU obligations under the Health and Safety at Work Act.

### Visibility and utilisation

Gain visibility of under-utilised vehicles at a glance and reroute vehicles to nearest jobs to increase productivity.

### Maximise tax savings

Supports operating cost method to maximise tax savings. Generate logbooks automatically recording business usage percentage.

### Reduce fuel consumption

Benchmark fuel efficiency to national averages for similar vehicles so you can proactively reduce fuel consumption and minimise costs.

### Reduce fleet costs

View analytical data filtered for your requirements to report on usage across the fleet.

### Reporting and Compliance

Access to a range of reports to fulfil your compliance requirements.

### Increase fleet efficiency

Proactively manage repairs, maintenance, excess mileage and residual values with live odometer readings.

### Vehicle and Driver Safety

Monitor adherence to speed limits and set driver behaviour benchmarking to improve safety outcomes.

### No driver intervention

Trips are automatically recorded and the device stays in the vehicle.

### Proactive maintenance

Ensure vehicles are maintained in line with the manufacturers recommendations and record tasks that need to be addressed at the next scheduled service.

### Pool booking

Eliminate paper processes and improve the efficiency of your vehicle pool bookings.

### RUC Management & Off

Road KM claims Enable electronic purchasing and display of RUC licences, and benefit from automatic RUC renewals 250km before the current licence expires.

### Manage driver behaviour

Access rich reporting on speeding, braking, acceleration, and more.

### Pre-installed

Order your new vehicles with EROAD directly installed.

“Whichever option you choose, you’ll improve vehicle compliance and benefit from enhanced operational performance across your fleet.”

## FAQs

### **How can telematics improve my OHS risk?**

Telematics can help you improve safety for drivers as well as increase your fleet’s operating profitability and reduce its environmental impact. You can use telematics to identify and correct bad driver behaviour which is the first step to reducing risk and increasing safety levels.

### **How is LogbookMe different to other logbook apps?**

With other logbook apps, the user needs to remember to start and stop the app on every trip. With the LogbookMe device, all driving data is automatically collected, which enhances the accuracy of the trip records and the driver doesn’t need to worry about forgetting to start or stop the log.

### **How does EROAD simplify health and safety compliance?**

Safe driving plays a key role in compliance with health and safety, insurance, legal and ACC obligations. EROAD’s in-vehicle technology and services support compliance by encouraging continuous improvement and rewarding safe driving.
